

ActiveCure™

Colloidal Alumina Silicate Curing Agent

Optimizes concrete cure, protects from water loss, and cracking

DESCRIPTION

ActiveCure™ is a water-based curing agent for freshly poured concrete. Sprayed onto the slab at a "walk-on" strength, it locks the mix water into the concrete. This gives the concrete the water it needs to cure fully, resist evaporation, and start building a stronger, denser surface with early tensile strength. The result is superior concrete, with fewer shrinkage cracks, less curling, and a harder, more durable finish that resists corrosion.

USES

For curing and strengthening freshly placed concrete: slabs, floors, pavements, roads, decks, and vertical shotcrete surfaces.

APPLICATION

Apply **ActiveCure™** once the concrete is firm enough to walk on without leaving footprints (usually 4–12 hours after pour). Spray evenly using a low- to medium-pressure sprayer with a fan tip. Only a single application is required. No rinsing needed.

PRECAUTION

Irritant to skin, wear gloves. Do not apply below 35°F (2°C) or above 90°F (32°C). Do not apply if rain is forecast within 6 hours.

TECHNICAL DATA

Chemistry: Water-based colloidal treatment.

Appearance: Cloudy to clear liquid.

Odor: None.

Coverage: approximately 200 sq. ft. per gallon (18.6 m²/gal).

Application window: 35°F to 90°F (2°C to 32°C).

PACKAGING

ActiveCure™ is available in single plastic gallons (3.8 liter), or 5 gallon (18.9 liter) pails for ease of handling.

STORAGE

Two years if stored in original sealed containers away from direct sunlight, or excessive heat.
